

1. Firebase Authentication Credentials

PURPOSE & UTILITY

Firebase provides secure client-side authentication, account registration, session management, and password encryption for customers on the Viśvam Harvest platform.

Step-by-Step Instructions to Obtain Credentials:

1. Log in to the Firebase Console at <https://console.firebase.google.com> using your Google account.
2. Select your project (or click **Add Project** to create a new project named *Visvam Harvest*).
3. Click the **Settings (Gear) Icon** in the left navigation sidebar and choose **Project Settings**.
4. In the **General** tab, scroll down to the *Your apps* section and click the Web icon (</>).
5. Enter Visvam Web as the App Nickname and click **Register App**.
6. Select the **Config** radio button under SDK setup and configuration.
7. Copy and provide the following 6 configuration values:

- apiKey
- authDomain
- projectId
- storageBucket
- messagingSenderId
- appId

2. Cloudinary Centralized Media CDN Credentials

PURPOSE & UTILITY

Cloudinary acts as the centralized image database and Content Delivery Network (CDN) for storing high-resolution product photography and packaging graphics. It automatically optimizes image sizes, ensuring fast page load speeds and enabling direct image uploads from the Admin Panel.

Step-by-Step Instructions to Obtain Credentials:

1. Log in to your account at <https://cloudinary.com>.
2. Navigate to the main **Dashboard** from the left sidebar.
3. Locate the section titled **Product Environment Credentials**.
4. Copy and provide the following 3 values:

- Cloud Name
- API Key
- API Secret (*Click "View API Secret" to reveal*)

3. MongoDB Database Connection String

PURPOSE & UTILITY

MongoDB serves as the central cloud database for Viśvam Harvest. It persistently stores product details, customer orders, shipping addresses, inventory stock levels, newsletter subscriptions, and concierge inquiries.

Step-by-Step Instructions to Obtain Connection String:

1. Log in to MongoDB Atlas at <https://www.mongodb.com/cloud/atlas>.
2. Under **Security** in the left menu, select **Database Access** → Click **Add New Database User**. Create a user (e.g., `visvam_admin`) and set a strong password.
3. Under **Security**, select **Network Access** → Click **Add IP Address** → Choose *Allow Access from Anywhere* (`0.0.0.0/0`) and confirm.
4. Navigate to **Database Deployments** and click the **Connect** button next to your cluster.
5. Select **Drivers** (Node.js).
6. Copy the provided connection string. Replace `<password>` with the database user password created in Step 2.

```
Format: mongodb+srv://username:password@cluster.mongodb.net/visvam_harvest?
retryWrites=true&w=majority
```
