AI AUTOMATION FOR GROWING BUSINESSES

Your team is doing **work a machine should be doing.**

- **Leads sit unanswered for hours**

because someone's busy elsewhere

- **The same 20 questions get answered**

manually, every single day

- **Follow-ups get forgotten**

and deals quietly go cold

- **Your best people spend half their time**

on work that isn't actually their job

This isn't a hiring problem. ***It's a systems problem.***

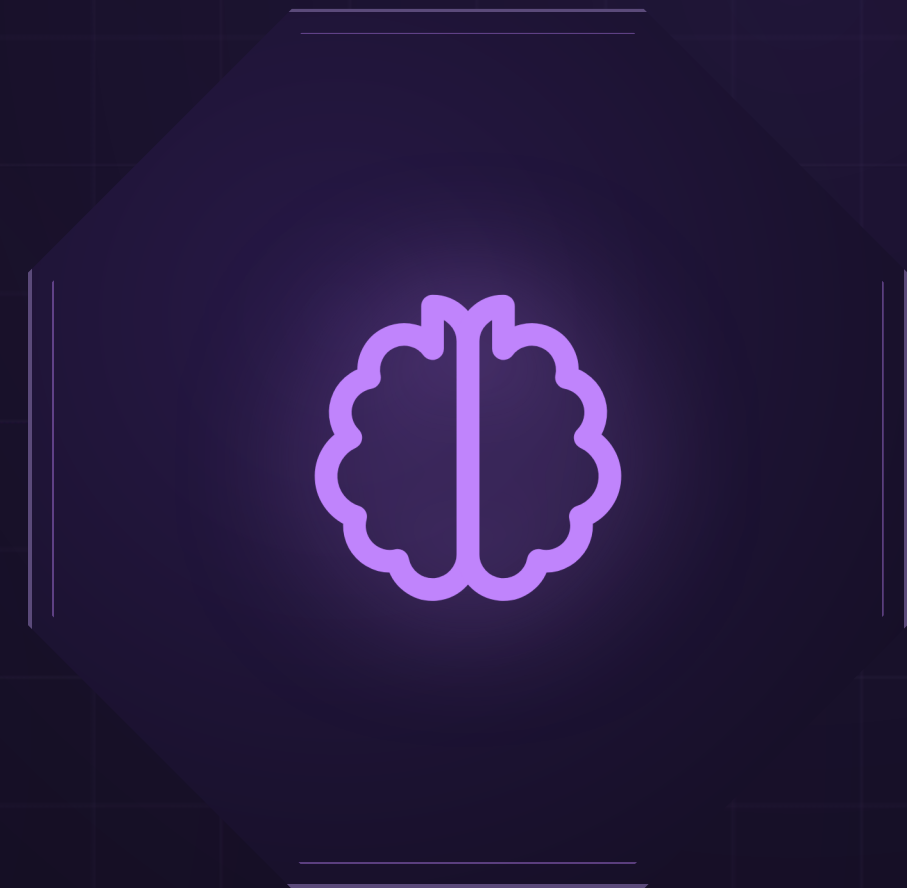

AI stopped being a “nice to have.” It’s table stakes now.

- Your competitors are already automating lead response, follow-ups, and support.
- Customers expect instant replies on WhatsApp, on calls, on LinkedIn — always.
- The businesses winning right now aren't bigger. They're just faster to respond.

The gap between “AI-powered” and “still doing it manually” is where deals are won and lost in 2026.

We're not a marketing agency that added “AI” to our pitch deck.

- **GoRan AI** is an AI automation studio built for growing businesses
- We design, build, and deploy real AI systems — calling agents, WhatsApp bots, content automation, custom software
- Founder-led, technically hands-on — the person pitching you is the person who can also build it
- Built with Indic-language support so your systems work the way your customers actually speak

Four ways we plug AI directly into how you make money.

AI Calling Agents

Handles inbound/outbound calls, qualifies leads, books appointments seamlessly.

WhatsApp Automation

Qualifies leads, answers FAQs, books meetings — 24/7, in your customer's language.

LinkedIn Automation

Consistent content + outreach that builds pipeline while you focus on delivery.

Custom Software & SaaS

Internal tools, dashboards, and platforms built for exactly how you operate.

AI Calling Agents

- Handles inbound calls, outbound follow-ups, and appointment booking
- Understands and responds in Indian languages, not just English
- Qualifies leads before they ever reach your sales team
- Integrates with your calendar, CRM, and existing workflows
- Optional: visual/avatar-based agents for a more human-feeling interaction

USE CASE FIT

Clinics, real estate, D2C brands, service businesses with high call volume

WhatsApp Automation

- Instantly responds to every inbound lead, day or night
- Qualifies leads and routes hot ones straight to your team
- Books appointments directly into your calendar
- Captures where each lead came from — ad, referral, or organic
- Built-in deduplication so no contact gets chased twice

USE CASE FIT

Any business getting leads via WhatsApp, Instagram, or website forms

LinkedIn Automation

- Structured content pipeline — posts go out on schedule, every time
- Built around your actual expertise, not generic AI-sounding content
- Outreach sequences that open real conversations with the right prospects
- Human-in-the-loop review — nothing goes live without your sign-off

USE CASE FIT

Founders and consultants who want visibility without the daily grind

Custom Software & SaaS

- Custom internal tools, admin panels, and dashboards
- Full SaaS product builds — from spec to launch
- Built on modern, scalable stacks (React, Node.js, MongoDB, and more)
- Integrated with payments, logistics, and whatever else your business runs on

USE CASE FIT

Businesses outgrowing off-the-shelf tools or launching a new product

From first call to live system no black box, no guesswork.

01

Discovery

We map exactly where you're losing time, leads, or money

02

Audit & Proposal

You get a clear picture of what to fix first and why

03

Build

We design and build the system, with you looped in throughout

04

Deploy & Test

Live in your business, tested against real scenarios

05

Support & Iterate

We stay on to refine as your business changes

"You're never waiting three weeks to see what we're building. You'll see it taking shape the whole way through."

Fixing the foundation before scaling the ads.

CLIENT: A growing D2C food & wellness brand

CHALLENGE

The client wanted to scale ad spend — but their site had critical product-loading bugs actively costing sales, plus compliance gaps (FSSAI, GST) putting them at legal risk.

WHAT WE DID

- Ran a full technical + compliance audit of the storefront
- Flagged critical bugs affecting product visibility and checkout
- Redesigned the admin panel for faster daily operations
- Delivered an India-specific compliance gap report

OUTCOME

[Add your result — e.g. cart drop-off reduced, compliance gaps closed]

↳ add your real result here before sending

Every lead answered. Every lead qualified. Zero manual work.

CLIENT: A service-based business handling high lead volume

CHALLENGE

Leads coming in from multiple channels with no consistent way to qualify or route them — hot leads were getting lost in the noise.

WHAT WE DID

- Built an AI-first WhatsApp agent that qualifies leads automatically
- Added ad-referral tracking so every lead source is known
- Built deduplication logic so no contact gets chased twice
- Automatic routing of qualified leads straight to sales

OUTCOME

[Add your result — e.g. response time, qualified-lead volume]

↳ add your real result here before sending

Not just a voice bot — an agent that feels like talking to someone.

CLIENT: A sales / lead-gen focused business

CHALLENGE

Standard voice bots felt robotic and had low trust from callers — hurting conversion on calls that mattered.

WHAT WE DID

- Built a calling agent with a visual, avatar-based presence
- Natural conversational flow with lip-synced responses
- Fully integrated into the existing lead pipeline

OUTCOME

[Add your result — e.g. engagement rate, conversion lift]

↳ add your real result here before sending

We're builders first. Everything else is second.

Founder-led delivery — You're talking to the person who builds it — not an account manager relaying to a dev team

Audit-first approach — We fix what's broken before we automate on top of it

Built for India — Indic-language support and real understanding of how Indian businesses operate

No bloated retainers — You pay for systems that work, not hours logged

Fast iteration — Small team, no bureaucracy — changes happen in days, not sprints

Not no-code duct tape. Real engineering underneath.

Workflow Automation

n8n, custom orchestration

AI Models

Gemini + India-first voice/language infra via Sarvam AI

Full-Stack Development

React, Node.js, MongoDB

Integrations

WhatsApp Cloud API, Google Calendar, payment gateways, CRMs

Every system we build, you own — no dependency on us forever to keep the lights on.

This works best if any of this sounds **familiar.**

- ✓ You're losing leads because response time is too slow
- ✓ Your team is buried in repetitive manual work a system could handle
- ✓ You want a consistent LinkedIn/content presence but don't have time to execute
- ✓ Off-the-shelf software doesn't quite fit how your business runs
- ✓ You're scaling and don't want to scale headcount at the same rate

If two or more of these are true — **this is probably a strong fit.**

What people usually ask before we start.

How long does this take to build?

Depends on scope — most single-system builds go from kickoff to live in a few weeks.

What if it doesn't work for our business?

That's exactly what discovery is for — we scope before we build, so there are no surprises.

Do we need technical people on our side?

No. We handle the build end-to-end. You just need to know your business.

What does this cost?

Every business's setup is different, so pricing is scoped after discovery — not one-size-fits-all.

Let's build something.

The next step is a 20-minute conversation, not a contract.

- We map where you're losing the most time or leads right now
- You get a clear, honest read on whether AI automation fits
- If it's a fit, we scope the first system together
- If it's not, you'll know that too — no pressure, no fluff
