

1 Enable Phone Authentication (SMS OTP)

REQUIRED

Enables 6-digit SMS OTP verification for instant phone login across India and internationally.

1. Log in to the **Firestore Console** at `https://console.firebase.google.com` .
2. Open your project: `visvam-1be38` .
3. In the left sidebar under **Build**, click **Authentication**.
4. Click on the **Sign-in method** tab.
5. Click on **Phone** (or *Add new provider > Phone*).
6. Toggle the **Enable** switch to **ON**.
7. (Recommended for testing) Expand **Phone numbers for testing**:
Add phone `+91 9999999999` with test OTP `123456` to test without spending SMS quota.
8. Click **Save**.

2 Enable Email Link (Passwordless Magic Link)

REQUIRED

Enables 1-click passwordless login via email magic links sent directly to customer inboxes.

1. In **Authentication > Sign-in method**, click **Email/Password**.
2. Ensure the first toggle **Email/Password** is switched **ON**.
3. Turn **ON** the second toggle: **Email link (passwordless sign-in)**.
4. Click **Save**.

3 Confirm Google Sign-In Provider

ACTIVE

1. In the **Sign-in method** tab, check that **Google** is listed and **Enabled**.
2. Ensure a **Project support email** is selected.
3. Click **Save** if making any updates.

4 Add Authorized Domains

SECURITY

Firebase will reject OTP requests if the origin domain is not whitelisted.

1. In **Authentication**, click the **Settings** tab (next to *Sign-in method*).
2. Click on **Authorized domains** in the sub-menu.
3. Verify and add the following domains:

- `localhost` (local development)
- `visvam.in` (production domain)
- `visvam-harvest.vercel.app` (or any active preview / staging URLs)

5 Verification Checklist

PROVIDER / FEATURE	REQUIRED SETTING	PURPOSE
Phone Auth	Enabled	SMS 6-digit OTP delivery
Email Link	Enabled (Passwordless)	Magic link sign-in to email inbox
Google Provider	Enabled	1-tap Google OAuth login
Authorized Domains	<code>localhost</code> , <code>visvam.in</code>	Allows web app to trigger SMS & Google auth
